

GR-1600XL

160 US TON MAX. CRANE CAPACITY

- Suitable for alternative fuels

February 2025. Unless otherwise specified, all information in this brochure refers to a standard crane equipment, and it is intended as general information only. No liability is assumed. Errors reserved. Product specifications and prices are subject to changes without notice. The photographs and/or drawings in this brochure are for illustrative purposes only. For correct and safe crane operation, the original operating manual and lifting capacity charts are essential. Failure to follow the corresponding Operator's Manual when using our equipment or failure to otherwise act responsibly may result in property damage, serious injury or death. The sole warranty applicable with respect to our equipment is the standard warranty as per general terms and conditions of sales and service (ask your local Tadano dealer for details), and Tadano makes no other warranty, express or implied. All rights reserved. Any use of the trademarks, logos, brand names and model names used herein is prohibited.

Key

	Counterweight		Rope length
	Lifting capacities on outriggers · 360°		Hook block
	Radius		Number of lines
	Main boom		Number of sheaves in hook block
	Main boom length		Line pulls available
	Folding swing-away jib		Possible load of hook block
	Insert		Weight of hook block
	Free on wheels		Distance head sheave axle – hook ground
	Tires		Max. outrigger load
	Hook block		Length of stroke (support cylinders)
	Hoist		Base machine
	Travel speed		Gross vehicle weight
	Gradeability		Weight on 1st axle
	Working speeds		Weight on 2nd axle
	Rope		Weight on 3rd axle
	Boom telescoping		Wire rope layer
	Boom elevation		Total wire rope
	Slewing		Smart Chart: Smart crane control system for main boom and rooster sheave operation enabling higher lifting capacities especially over outriggers. Enables safe use of the full capacity of the crane even in asymmetric outrigger configurations. Visualization of full working area in operator cabin. In-cab lift simulation.
	Max. line pull		
	Rope diameter		

SPECIFICATIONS

Specifications

Vehicle dimensions

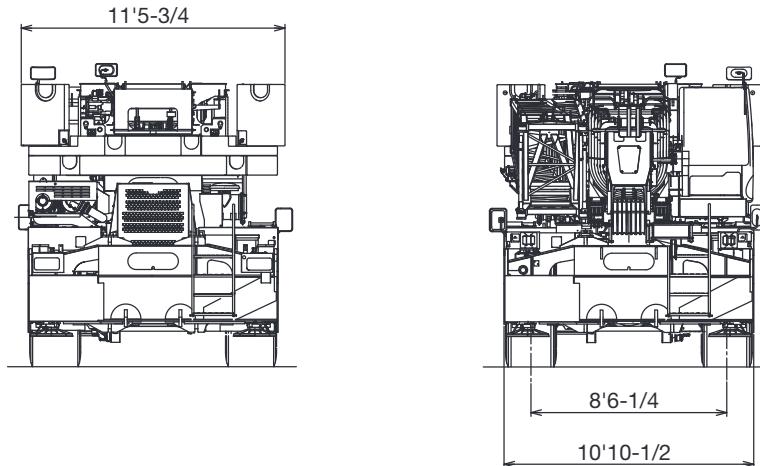

Dimension is with boom angle at -1.5 degree.

Specifications

Vehicle dimensions

Optional weight 24,500 lb

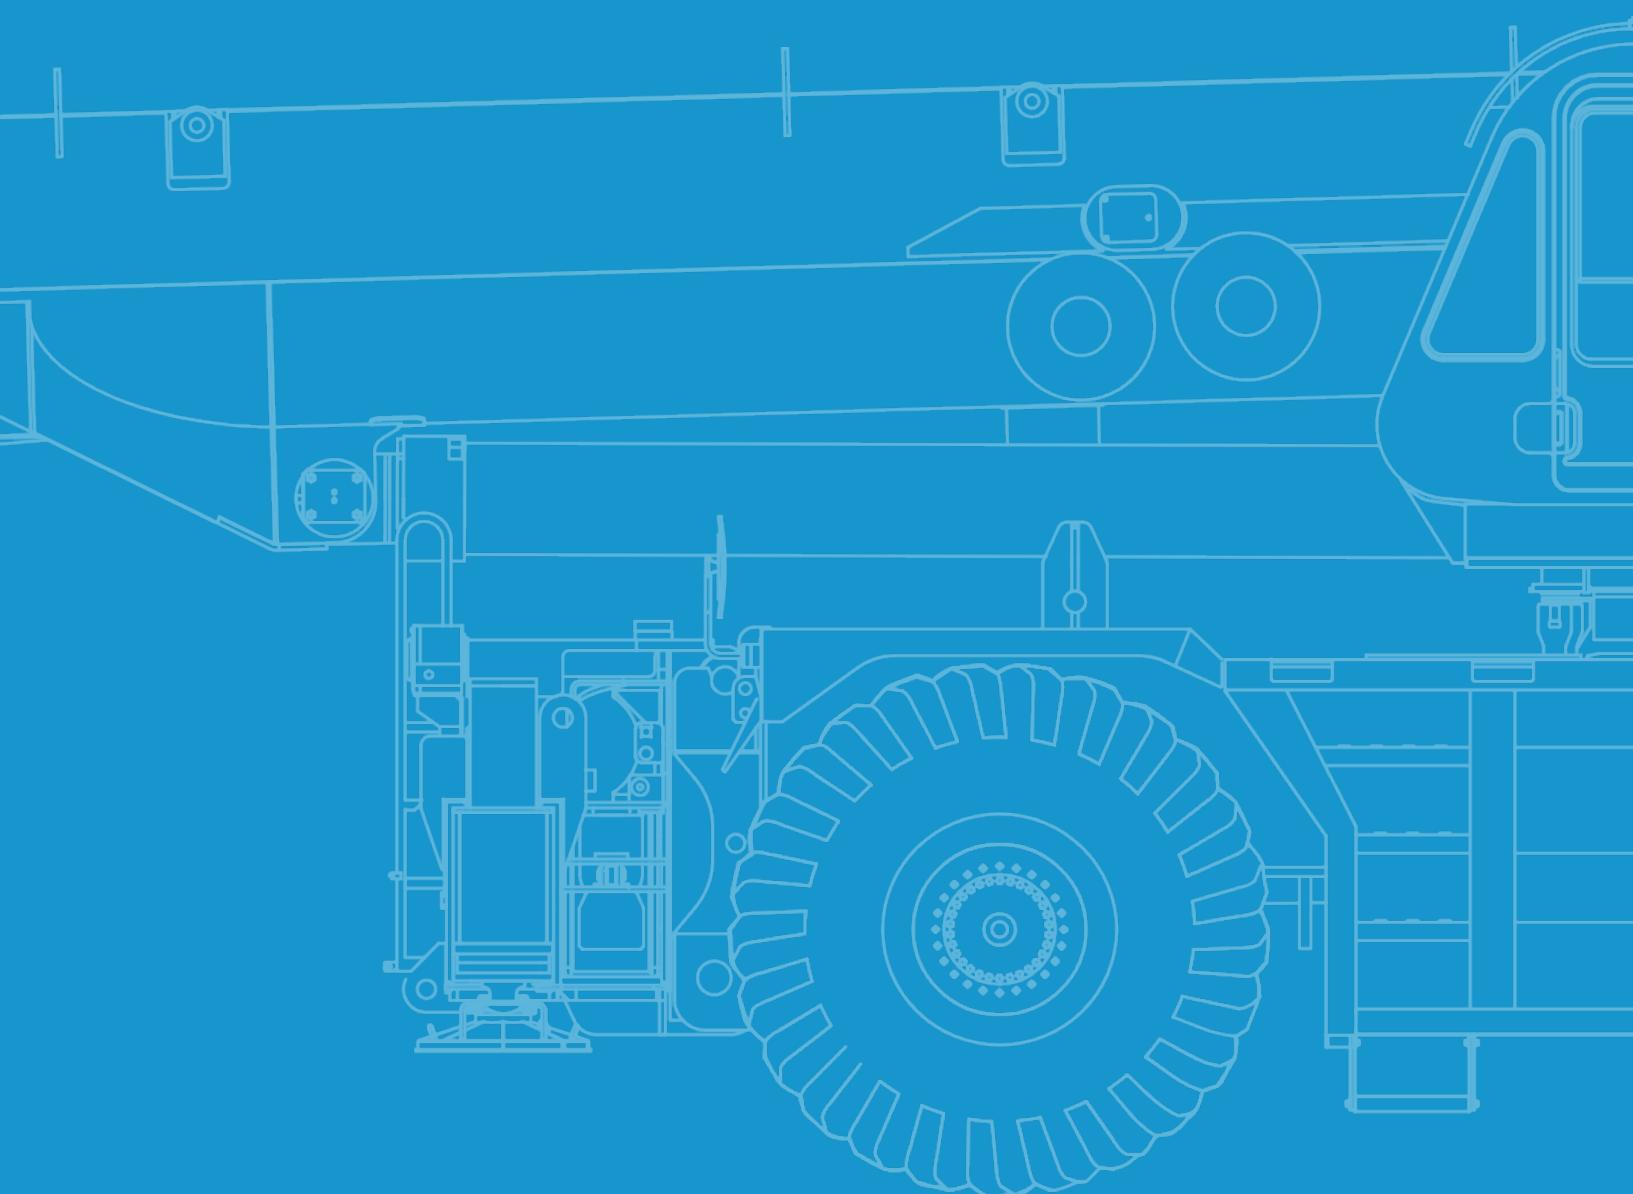

General dimensions

Overall length	approx. 53' 1-3/8"
Overall width	approx. 10' 10-1/2"
Overall height	approx. 12' 5"
Carrier length for traveling	approx. 27' 1-1/4"
6 wheel steer*	32' 6"
2 wheel steer*	48' 11"

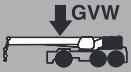

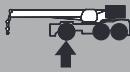

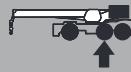

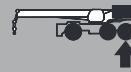

* Turning radius (26.5R25☆☆ tires)

TECHNICAL DATA FOR OPERATION

Operation

Main boom	approx. 450 s (42.8 ft - 200.1 ft)	-1.5° - 81.5° approx. 28 s (20° - 60°)
	1.3 min ⁻¹	
Hoist		
	15,900 lb	3/4"
	15,900 lb	3/4"

Operation

Line speeds and pulls

Main or auxiliary winch - 15" drum

	low 	high  ¹⁾	 low
1	253 ft/min.	354 ft/min.	21,800 lb
2	276 ft/min.	384 ft/min.	19,900 lb
3	299 ft/min.	413 ft/min.	18,200 lb
4	318 ft/min.	446 ft/min.	16,800 lb
5	341 ft/min.	476 ft/min.	15,600 lb
6	361 ft/min.	505 ft/min.	14,600 lb
7 ³⁾	384 ft/min.	535 ft/min.	13,700 lb

Maximum permissible line pull wire strength. 15,900 lb with 7 x 35 class rope.

1) Line speed based only on hook block, not loaded.

2) Developed by machinery with each layer of wire rope, but not based on rope strength or other limitations in machinery or equipment.

3) Seventh layer of wire rope are not recommended for hoisting operations.

Drum wire rope capacities

Main and auxiliary drum grooved lagging 3/4" wire rope

		
1	147.0 ft	147.0 ft
2	159.4 ft	306.4 ft
3	172.2 ft	478.7 ft

1) Loaded boom angle (°)

2) Rated lifting capacity in pounds

Notes to Lifting Capacity

GENERAL

1. RATED LIFTING CAPACITIES apply only to the machine as originally manufactured and normally equipped by TADANO LTD. Modifications to the machine or use of optional equipment other than that specified can result in a reduction of capacity.
2. Hydraulic cranes can be hazardous if improperly operated or maintained. Operation and maintenance of this machine must be in compliance with information in the operation and maintenance manual supplied with the crane. If this manual is missing, order a replacement through the distributor.
3. The operator and other personnel associated with this machine shall fully acquaint themselves with the latest applicable ASME B30.5 safety standards for cranes as mentioned in OSHA CFR29 part 1926.

SET UP

1. Rated lifting capacities on the load chart are the maximum allowable crane capacities, are based on the machine standing level on firm supporting surface under ideal job conditions. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger floats or tires to spread the loads to a larger surface.
2. For outrigger operation, outriggers shall be properly extended with tires free of supporting surface before operating crane.

OPERATION

1. Rated lifting capacities have been tested to and meet minimum requirements of SAE J1063-Cantilevered Boom Crane Structures Method of Test.
2. Rated lifting capacities do not exceed 85% of the tipping load on outriggers fully extended as determined by SAE J765-Crane Stability Test Code.
Rated lifting capacities for partially extended outriggers are determined from the formula, rated lifting capacities = (tipping load - 0.1 × tip reaction) / 1.25.
3. Rated lifting capacities above thick lines in the chart are based on crane strength and those below, on its stability. They are based on actual load radius increased by boom deflection.
4. The weight of handling device such as hook blocks, slings, etc., must be considered as part of the load and must be deducted from the lifting capacities.
5. Rated lifting capacities are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, inflation of tires, operating speeds, side loads, etc. Side pull on the boom or jib is extremely dangerous. Such action can damage the boom, jib or slewing mechanism, and lead to overturning the crane.
6. Rated lifting capacities do not account for wind on lifted load or boom. We recommend against working under the conditions that the load is out of control due to a strong wind. During boom lift, consider that the rated lifting capacity is reduced by 50% when the wind speed is 20 mph to 27 mph; reduced by 70% when the wind speed is 27 mph to 31 mph. If the wind speed is 31 mph or over, stop operation. During jib lift, stop operation if the wind speed is 20 mph or over.
7. Rated lifting capacities at load radius shall not be exceeded. Do not tip the crane to determine allowable loads.
8. Do not operate at boom lengths, radii, or boom angle, where no capacities are shown. Crane may overturn without any load on the hook.
9. When boom length is between values listed, refer to the rated lifting capacities of the next longer and next shorter booms for the same radius. The lesser of the two rated lifting capacities shall be used.
10. When making lifts at a load radius not shown, use the next longer radius to determine allowable capacity.
11. Load per line should not exceed 15,900 lb for main winch and auxiliary winch.
12. Check the actual number of parts of line with LOAD MOMENT INDICATOR (AML-C) before operation. Maximum lifting capacity is restricted by the number of parts of line of LOAD MOMENT INDICATOR (AML-C). Limited capacity is as determined from the formula, single line pull for main winch 15,900 lb x number of parts of line.
13. The boom angle before loading should be greater to account for deflection. For rated lifting capacities, the loaded boom angle and the load radius is for reference only.
14. Do not operate extension or retraction of the boom with loads.
15. For lifting capacity of single top, deduct the weight of the load handling equipment from the rated lifting capacity of the boom.
For the lifting capacity of single top, the net capacity shall not exceed 15,900 lb including main boom hook mass attached to the boom.
16. When the base jib or top jib or both jibs are removed, set the jib state switch to the REMOVED position.
17. When erecting and stowing jib, be sure to retain it by hand or by other means to prevent its free movement.
18. Use "ANTI-TWO-BLOCK DEVICE" disable switch when erecting and stowing jib and when stowing hook block.
While the switch is pushed, the winch does not stop, even when overwind condition occurs.
19. For selected boom length or less with jib, rated lifting capacities are determined by loaded boom angle only in the column headed "selected boom + jib".

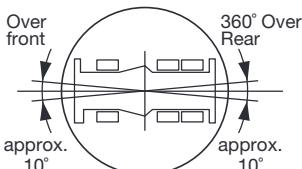

Notes to Lifting Capacity

20. The boom extending operation and lowering operation are prohibited during lifting a load with multiple line lift.
When lifting a load by using jib (aux. winch) and boom (main winch) simultaneously, do the following:
 - Enter the operation status as jib operation, not as boom operation.
 - Before starting operation, make sure that the mass of a load is within the rated lifting capacity for the jib.
(The AML display indicates inaccurate working radius and actual load values during multiple line lift.)When lifting a load by using single top (aux. winch) and boom (main winch) simultaneously, do the following:
 - Enter the operation status as single top operation, not as boom operation.
 - Before starting operation, make sure that the mass of a load is within the rated lifting capacity for the single top.
(The AML display indicates inaccurate working radius and actual load values during multiple line lift.)
21. Outriggers shall be extended 26'10-7/8" spread when installing or removing removable counterweight.

DEFINITIONS

1. Load radius: Horizontal distance from a projection of the axis of rotation to supporting surface before loading to the center of the vertical hoist line or tackle with load applied.
2. Loaded boom angle: The angle between the boom base section and the horizontal, after lifting the rated lifting capacity at the load radius.
3. Working area: Area measured in a circular arc about the centerline of rotation.
4. Freely suspended load: Load hanging free with no direct external force applied except by the hoist line.
5. Side load: Horizontal side force applied to the lifted load either on the ground or in the air.

Warning and Operating Instructions Notes for on Rubber Lifting Capacities

1. Rated lifting capacities on-rubber do not exceed 75% of tipping loads as determined by SAE J765-Crane Stability Test Code.
2. On rubber lifting is only permitted without counterweight and stationary. Creep operation is prohibited.
Rated lifting capacities shown in the chart are based on the condition that crane is set on firm level surfaces with suspension lock applied. Those above thick lines are based on tire capacity and those below, on crane stability. They are based on actual load radius increased by tire deformation and boom deflection.
3. If the suspension lock cylinders contain air, the axle will not be locked completely and rated lifting capacities may not be obtainable.
Bleed the cylinders according to the operation safety and maintenance manual.
4. Rated lifting capacities are based on proper tire inflation, capacity and condition. Damaged tires are hazardous to safe operation of crane.
5. Tires shall be inflated to correct air pressure. Tires: 26.5R25☆☆ – air pressure: 94 psi.
6. Over front operation shall be performed within 10 degrees in front of chassis.

7. On rubber lifting with "jib" is not permitted. Maximum permissible boom length is 71.6'.
8. When making lift on rubber stationary, set parking brake.
9. The mass of the hook (2,381 lb for 110 ton capacity, 661 lb for 7.9 ton capacity), slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.
10. For rated lifting capacity of single top, reduce the rated lifting capacities of relevant boom according to a weight reductions for auxiliary load handling equipment. Capacities of single top shall not exceed 15,900 lb including main hook.
11. The lifting capacity data stowed in the LOAD MOMENT INDICATOR (AML-C) is based on the standard number of parts of line listed in the chart. Standard number of parts of line for on rubber operation should be according to the following table.

Boom length in feet	42.8' to 71.6'
Number of parts of line	4

Notes for Load Moment Indicator (AML-C)

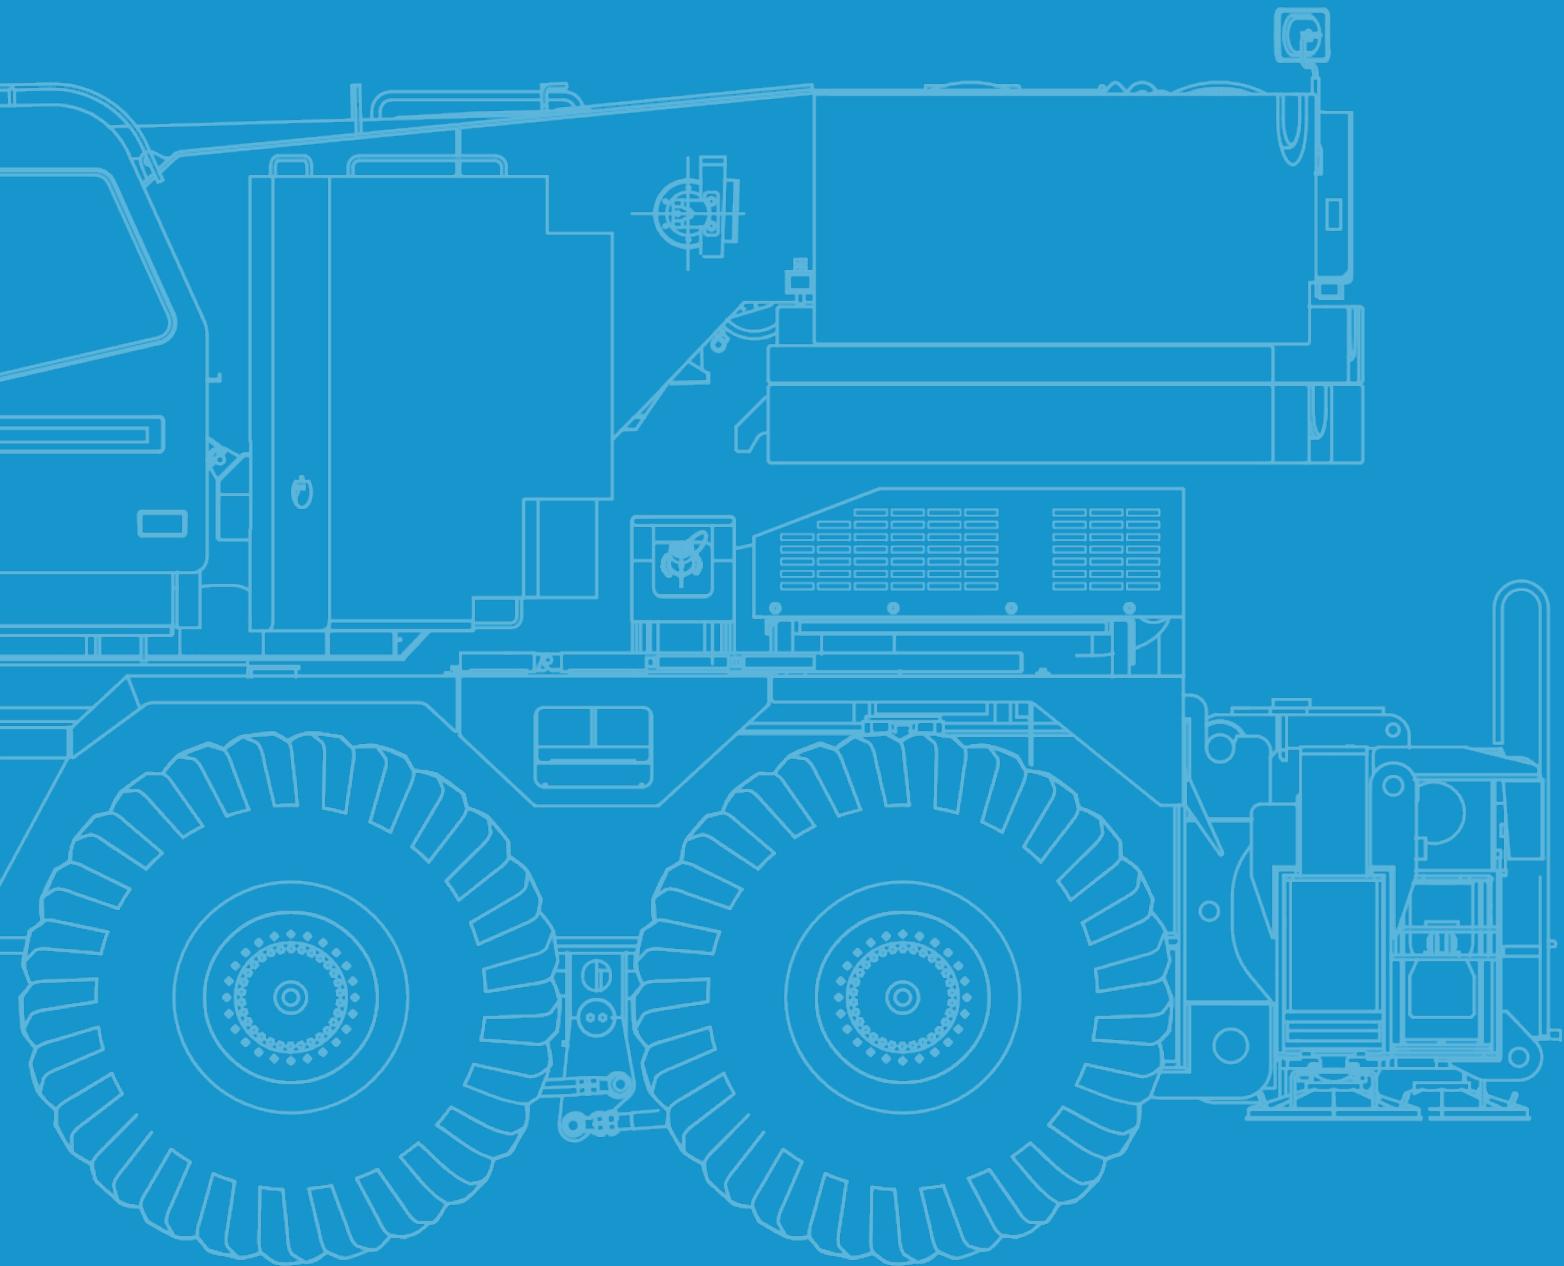

1. Set AML select keys in accordance with the actually operating crane conditions and don't fail to make sure, before crane operation, that the displays on front panel are correct.
2. When operating crane on outriggers:
 - Set "P.T.O." switch to "ON":
 - Press the outrigger state select key to register for the outrigger operation. If the display agrees with the actual state, press the set key to register. After the completion of the registration, the pop-up window closes.
 - Press the lift state select key to register the lift state to be used (single top / jib / boom).
 - Each time the lift state select key is pressed, the display changes. If the display agrees with the actual state, press the set key to register. After the completion of the registration, the pop-up window closes.
 - When erecting and stowing jib, select the status of jib set (jib lift indicator symbol flickers).
3. When operating crane on rubber:
 - Set "P.T.O." switch to "ON":
 - Press the outrigger state select key to register for the on rubber operation. Each time the outrigger state select key is pressed, the display changes. Select the stationary operation, the on rubber state indicative symbol flickers.
 - Press the lift state select key to register the lift state.

However, pay attention to the following.

For stationary operation.

 - The front and rear capacities are attainable only when the over front or rear position. The front capacities are attainable only when the over front position symbol comes on. When the boom is more than 2 degrees from centered over front of chassis, 360° capacities are in effect.
 - When a load is lifted in the front or rear position and then swung to the side area, make sure the value of the LOAD MOMENT INDICATOR (AML-C) is below the 360° lifting capacity.
4. This machine is equipped with an automatic slewing stop device (for the details, see operation and maintenance manual). But, operate very carefully because the automatic slewing stop does not work in the following case.
 - During on-rubber operation.
 - When the "P.T.O" switch is set to "OVERRIDE" and the "OVERRIDE" key switch outside the cab is on.
5. During crane operation, make sure that the displays on front panel are in accordance with actual operating conditions.
6. The displayed values of LOAD MOMENT INDICATOR (AML-C) are based on freely suspended loads and make no allowance for such factors as the effect of wind, sudden stopping of loads, supporting surface conditions, inflation of tire, operating speed, side loads, etc. For safe operation, it is recommended when extending and lowering boom or slewing, lifting loads shall be appropriately reduced.
7. LOAD MOMENT INDICATOR (AML-C) is intended as an aid to the operator. Under no condition should it be relied upon to replace use of capacity charts and operating instruction. Sole reliance upon LOAD MOMENT INDICATOR (AML-C) aids in place of good operating practice can cause an accident. The operator must exercise caution to assure safety.

TECHNICAL DESCRIPTION

Technical Description

Crane specifications

Boom	6 sections boom of round box construction with 7 sheaves at boom head, extended by single telescoping cylinder. 2 easily removable wire rope guards, rope dead end provided on both sides of boom head. Boom telescope sections are supported by wear pads both vertically and horizontally. Fully retracted length: 42.8' · Fully extended length: 200.1' · Extension speed: 157.3' in 450 s · Sheave root diameter: 15-3/4".
Boom elevation	By a double acting hydraulic cylinder with holding valve. Boom angle indicator. Automatic speed reduction and slow stop function. Boom angle: -1.5° - 81.5° · Boom raising speed: 20° to 60° in 28 s.
Jib	2 stage bi-fold lattice type, offset angle (5°-40°) by tilt cylinder. Single sheave at the head of both jib sections. Stowed alongside base boom section. Assistant cylinders for mounting and stowing, controlled at right side of superstructure. Self stowing jib mounting pins. Length: 33.8', 59.1'. Offset: 5°-40° · Sheave root diameter: 17-5/16".
Insert jib (option)	Insert lattice jib can be used for reaching higher place. Length: 23.0' (1 piece), 45.9' (2 pieces).
Short jib (option)	2 sheaves, heavy lifting jib can be used for lifting lifting heavy load in tight spaces. Length: 11.8'. Offset: 20°, 40° · Sheave root diameter: 16-1/2".
Auxiliary lifting sheave (single top)	Single sheave, mounted to main boom head for single line work (stowable). Root diameter: 17-5/16".
Anti-two block device	Pendant type over-winding cut out device with audio-visual (FAILURE lamp /BUZZER) warning system.
Slewing	Hydraulic axial piston motor driven through planetary slewing speed reducer. Continuous 360° full circle slewing on ball bearing turn table at 1.3 min⁻¹ {rpm}. Equipped with manually locked/released slewing brake. A 360° positive swing lock manually engaged in cab. Twin slewing system: Free slewing or lock slewing controlled by selector switch on front console. Slewing speed: 1.3 min⁻¹ {rpm}.
Counterweight	Standard weight: 40,100 lb · Extra weight right (option): 12,250 lb · Extra weight left (option): 12,250 lb.
Winch	MAIN WINCH: Variable speed type with grooved drum driven by hydraulic axial piston motor through speed reducer. Power load lowering and raising. Equipped with automatic brake (neutral brake) and counterbalance valve. Controlled independently of auxiliary winch. Equipped with cable follower and drum rotation indicator. MAIN DRUM: Root diameter x wide: 15" x 29-1/4". Wire rope diameter x length: 3/4" x 1050'. Drum capacity: 1293', 7 layers. Maximum single line pull (1st layer): 21,800 lb. Maximum permissible linepull wire strength: 15,900 lb. AUXILIARY WINCH: Variable speed type with grooved drum driven by hydraulic axial piston motor through speed reducer. Power load lowering and raising. Equipped with automatic brake (neutral brake) and counterbalance valve. Controlled independently of main winch. Equipped with cable follower and drum rotation indicator. AUXILIARY DRUM: Root diameter x wide: 15" x 29-1/4". Wire rope diameter x length: 3/4" x 738'. Drum capacity: 1293', 7 layers. Maximum single line pull (1st layer): 21,800 lb. Maximum permissible linepull wire strength: 15,900 lb. WIRE ROPE: Non-rotating 3/4" 7 x 35 class. Breaking strength 79,400 lb.
Hook blocks	110 ton: 7 sheaves with hook block and safety latch. 50 ton (option): 3 sheaves with hook block and safety latch. 7.9 ton: Weighted hook with swivel and safety latch.
Hydraulic system	PUMPS: 2 variable piston pumps for crane functions. Tandem gear pump for steering, swing and optional equipment. Powered by carrier engine. Pump disconnect for crane is engaged/disengaged by rotary switch from operator's cab. CONTROL VALVES: Multiple valves actuated by pilot pressure with integral pressure relief valves. RESERVOIR: 202 gallons capacity. External sight level gauge. FILTRATION: BETA10 = 10 return filter, full flow with bypass protection, located inside of hydraulic reservoir. Accessible for easy replacement. OIL COOLER: Air cooled fan type.
Cab and controls	Both crane and drive operations can be performed from one cab mounted on rotating superstructure. 15° tilt, left side, 1 man type, steel construction with sliding door access and safety glass windows opening at side. Door window is powered control. Windshield glass window and roof glass window are shatter-resistant. Tilt-telescoping steering wheel. Adjustable control lever stands for swing, boom elevating, boom telescoping, auxiliary winch and main winch. Control lever stands can change neutral positions and tilt for easy access to cab. 3 way adjustable operator's seat with high back, headrest and armrest. Engine throttle knob. Foot operated controls: boom elevating boom telescoping, service brake and engine throttle. Hot water cab heater and air conditioning. Dash-mounted engine start/stop, monitor lamps, cigarette lighter, drive selector switch, parking brake switch, steering mode select switch, power window switch, pump engaged/disengaged switch, swing brake switch, telescoping /auxiliary winch select switch, outrigger controls, free swing/lock swing selector switch, eco mode switch, high speed winch (main/aux.) switch and ashtray. Instruments: Torque converter oil temperature, engine water temperature, air pressure, fuel, speedometer, tachometer, hour meter and odometer/tripmeter. Hydraulic oil pressure is monitored and displayed on the AML-C display panel.

Technical Description

Crane specifications

Tadano electronic LOAD MOMENT INDICATOR system (AML-C) including:
Control lever lockout function with audible and visual pre-warning. Boom position indicator. Outrigger state indicator.
Boom angle / boom length / jib offset angle / jib length / load radius / rated lifting capacities / actual loads read out.
Ratio of actual load moment to rated load moment indication. Automatic speed reduction and slow stop function
on boom elevation and slewing. Working condition register switch. Load radius / boom angle / tip height / slewing
range preset function. External warning lamp. Tare function. Fuel consumption monitor. Main winch / auxiliary winch
select. Drum rotation indicator (audible and visible type) main and auxiliary winch.

TADANO AML-C monitors outrigger extended length and automatically programs the corresponding
“RATED LIFTING CAPACITIES” table.

Operator's right hand console includes transmission gear selector and sight level bubble. Upper console includes
working light switch, roof washer and wiper switch emergency outrigger set up key switch, jib equipped/removed
select switch, eco mode switch, high speed winch (main/aux.) switch, cab tilt switch. Slewing lock lever.

NOT : Each crane motion speed is based on unladen conditions.

Carrier specifications

Type	Rear engine, left hand steering, driving axle 2-way selected type by manual switch, 6x2 - 1st drive, 6x4 - 1st and 3rd drive.
Frame	High tensile steel, all welded mono-box construction.
Engine	Model: Cummins QSB6.7 EPA Tier4 Final · Type: Direct injection diesel · No. of cylinders: 6 · Combustion: 4 cycle, turbo charged and after cooled · Bore x stroke: 4.212 in. x 4.882 in. · Displacement: 409 cu. in liters · Air inlet heater: 24 volt preheat · Air cleaner: Dry type, replaceable element · Oil filter: Full flow with replaceable element · Fuel filter: Full flow with replaceable element · Fuel tank: 79.2 gallons, right side of carrier · Cooling: Liquid pressurized, recirculating by-pass · Radiator: Fin and tube core, thermostat controlled · Fan: Suction type, 9-blade, 28 in. diameter · Starting: 24 volt · Charging: 24 volt system, negative ground · Battery: 2-120 amp. hour · Compressor, air: 17.0 cfm@ 2,400 rpm · Output, max.: Gross 270 HP (201 kW)@2,000 rpm · Torque, max.: 730 ft-lb (990 Nm)@1,500 rpm · Capacity: Cooling water 2.7 gallons, lubrication 4.0 gallons, fuel 79.2 gallons, DEF/AdBlue 10.0 gallons.
Transmission	Electronically controlled full automatic transmission. Torque converter driving full powershift with driving axle selector. 5 forward and 2 reverse speeds, constant mesh. 2 speeds - high range - 2 wheel drive; 4 wheel drive. 3 speeds - low range - 4 wheel drive.
Travel speed	9.3 mph with counterweight. 2.5 mph without counterweight.
Gradeability	44% (with counterweight 64,600 lb), 52% (with counterweight 40,100 lb), 57% machine should be operated within the limit of engine crankcase design (30°: Cummins B6.7 EPA Tier4 Final).
Axle	1st: Full floating type, steering and driving axle with planetary reduction and open differential. 2nd: Steering and not driving axle. 3rd: Full floating type, steering and driving axle with planetary reduction and open differential.
Steering	Hydraulic power steering controlled by steering wheel. Four steering modes available: 2 wheel front, 4 wheel rear, 6 wheel coordinated and 6 wheel crab.
Suspension	1st: Rigid mounted to frame. 2nd and 3rd: “Hydro-pneumatic suspension cylinders” with levering adjustment and oscillation.
Brake systems	Service: Air over hydraulic disc brakes on all 6 wheels. Parking/Emergency: Spring applied-air released brake acting on input shaft of 1st and 3rd axle. Auxiliary: Electro-pneumatic operated exhaust brake.
Tires	26.5R25☆☆ - air pressure: 94 psi.
Outriggers	Four hydraulic, beam and jack outriggers. Vertical jack cylinders equipped with integral holding valve. Each outrigger beam and jack is controlled independently from cab. Beams extend to 26' 10-7/8" center-line and retract to within 10' 10-1/2" overall width with floats. Outrigger boxes are self-removable for ease of transportation. Outrigger jack floats are attached thus eliminating the need of manually attaching and detaching them. Controls and sight bubble located in superstructure cab. Four outrigger extension lengths are provided with corresponding “RATED LIFTING CAPACITIES” for crane duty in confined areas. Min. extension: 9' 9-3/4" center to center Mid. extension: 18' 1/2" center to center Mid. extension: 23' 11-3/8" center to center Max. extension: 26' 10-7/8" center to center Float size (diameter): 1' 10-1/2"

Technical Description

Standard equipment

Six section extended boom by single telescoping cylinder	42.8'-200.1'
Bi-fold lattice jib	33.8' or 59.1'; offset angle (5°-40°) by tilt cylinder.
Quick reeving type bi-fold jib	
Anti-two block device	Overwind cutout.
Mirror	For main and auxiliary winch.
Work lights	
Variable speed main winch	With grooved drum, cable follower and 1050' of 3/4" cable.
Variable speed auxiliary winch	With grooved drum, cable follower and 738' of 3/4" cable.
Drum rotation indicator	Audible, visible and thumper type - main and auxiliary winch.
Auxiliary lifting sheave	Single top, stowable.
2-speed winch	
Tadano twin slewing system and 360° positive slewing lock	
Positive control	
Hydraulic oil cooler	
15° tilt cab	
3 way adjustable cloth seat	With armrests, high back and seat belt.
Tilt-telescoping steering wheel	
Tinted safety glass and sun visor	
Front windshield wiper and washer	
Roof window wiper and washer	
Power window	Cab door.
Cigarette lighter and ashtray	
Cab floor mat	
Pump disconnect in operator's cab	
Air conditioner	Hot water heater and cooler.
Full instrumentation package	
Self centering finger control levers	With pilot control.
Control pedals	For boom elevating and boom telescoping.
Warning device (visual)	Low oil pressure / high water temperature.
2nd and 3rd steer centering light	
Air cleaner dust indicator	
Tadano electronic load moment indicator system (AML-C)	
Tare function	
Boom angle indicator	
Outrigger extension length detector	
Electronic crane monitoring system	
Rear view mirrors	Right and left side.
Fenders	
Air dryer	
Complete highway light package	

Technical Description

Standard equipment

Towing hooks	Front and rear.
Hook block tie down	Front bumper.
Weighted hook storage compartment	
Halogen head lamp	
Self-removable outrigger boxes	
Independently controlled outriggers	
Four outrigger extension positions	
Self-storing outrigger pads	
Electronic controlled automatic transmission driven by torque converter	
Drive / steer	6 x 4 x 6.
Axles	1st axle: open differential. 3rd axle: open differential
Automatic rear axle oscillation lockout system	
Tires	26.5R25☆☆ tires.
Disc brakes	
Water separator with filter	High filtration.
Back-up alarm	
24 volt electric system	
Tool storage compartment	
Tire inflation kit	
Engine	Cummins QS 6.7 turbo charged after cooled engine (270 HP) with exhaust brake.
Engine over-run alarm	
Lifting eyes	
Telematics	Machine data logging and monitoring system with HELLO-NET via internet (availability depends on countries).
Fuel consumption monitor	
Eco mode system	
Self-removable counterweight	
Hook	110 ton - 7 sheaves with hook block and safety latch. 7.9 ton - Weighted hook with swivel and safety latch.

Optional equipment

Additional weight	24,500 lb.
Removable boom system	
Working lamp	With remote controller.
Boom and jib mounted aircraft warning light	
Wind speed indicator	
Emergency steering system	
Over-unwinding prevention	
Insert jib	
Short jib	
Hook block	50 ton - 3 sheaves with hook block and safety latch.
